EXAMINER

DONLON, RYAN D

ART UNIT

PAPER NUMBER

3695

NOTIFICATION DATE

DELIVERY MODE

09/16/2010

ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

usptocorrespondence@austin-rapp.com

Office Action Summary	Application No. 10/561,897	Applicant(s) SHEFFIELD ET AL.	
	Examiner RYAN D. DONLON	Art Unit 3695	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 January 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-10, 12-26, 28 and 29 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-10, 12-26 and 28-29 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 22 December 2005 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 13 January 2010 has been entered.

Drawings

2. The drawings filed on 22 December 2005 contain informalities which are acceptable for Examination purposes; however formal drawings should be supplied prior to an allowance. The informalities are as follows:

- a. Hand written labels should be replaced with their clearly typed equivalent (e.g. element 188, 210 and the conditional logic between elements 158 and 162).
- b. Informal shading from elements should be removed (e.g. Figures 4 and 5)
- c. Washed out elements should be replaced with their clear and typed equivalent (e.g. elements 422, 424, and 426)

Claim Status

3. This communication is in response to Applicant's communications filed on 13 January 2010. Amendments to claims 1, 12-15, 17-19 and 26 have been entered.

Art Unit: 3695

Previous rejections made under 35 USC 112 in the last office action have been withdrawn in view of the amendments. Claims 1-10, 12-26 and 29-30 are pending in this application.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-10 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Admon. US 2006/0287924 (hereinafter Admon) in view of Mendiola et al 2004/0058694 A1 (hereinafter Mendiola).

6. As per **claim 1**:

Admon discloses an auction system for facilitating bidder participation in an auction for the purchase of a lot, comprising:

at least a first data processing device and a memory in communication with the data processing device (see at least paragraph [0026]), the memory storing instructions executable by the processor to: receive a plurality of messages from a plurality of bidders for the lot, each message including a bid for the lot (see at least paragraph [0032]);

determine whether each of the plurality of messages comprises an acceptable bid (see paragraph 22 which requires a participation fee to be a bid);

charge each bidder for sending the bid acceptance message (see at least paragraph [0022] wherein Herzog discloses charging the bidder, "for sending the bid acceptance message" is considered intended use since the method would be performed the same way, regardless of what the charge is intended for);

determine a bidder associated with a lowest unique bid for the lot, wherein at a close of the auction the lowest unique bid is a winning bid in the auction for the purchase of the lot (see at least paragraph [0022] and [0027]), wherein at least one acceptable bid is not a winning bid.

7. Admon does not disclose for each acceptable bid, sending a bid acceptance messages message to each of said bidders notifying the bidder of the status of the bidder's bid by SMS;

8. However Mendiola discloses sending a bid acceptance messages message to each of said bidders notifying the bidder of the status of the bidder's bid by SMS (see at least paragraph [0188]);

9. It would have been obvious to one of ordinary skill in the art to include in the system for auctioning a lot at the lowest unique bid of Admon, the system for sending acceptance messages as taught by Mendiola because this would have provided convenient communication of messages (see at least Mendiola paragraph [0022]). Further because the claimed invention is merely a combination of old elements, and in the combination, each element merely would have performed the same function as is did separately, and one of ordinary skill in the art would have recognized that the results of the combination were predictable..

Art Unit: 3695

10. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings Admon and Mendiola to obtain the invention as specified in claim 1.

11. As per **claim 2:**

Mendiola discloses an auction system of claim1, wherein the plurality of messages is received via SMS messaging (see at least paragraph [0181]-[0184]).

12. As per **claim 3:**

Admon and Mendiola do not disclose an auction system of claim1, wherein the instructions are further executable to charge each bidder by sending the bid acceptance message by a reverse billed SMS message.

13. However Official Notice is taken that it was well known in the art at the time of the invention to reverse bill SMS messages. For example, it was well known for businesses to send reverse billed SMS messages for paying for images, ring tones, vending machines, or a variety of other products.

14. It would have been obvious to one of ordinary skill in the art to include in the system for auctioning of Herzog and Mendiola (see the rejection of claim 1), the well known system for reverse billing using SMS for paying for services because the claimed invention would provide a convenient system for charging customers. Further the claimed invention is merely a combination of old elements, and in the combination, each element merely would have performed the same function as is did separately, and one

Art Unit: 3695

of ordinary skill in the art would have recognized that the results of the combination were predictable.

15. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings Admon, Mendiola and the well known system for reverse billing SMS messages to obtain the invention as specified in claim 3.

16. As per **claim 4**:

Admon discloses an auction system of claim 1, wherein the instructions are further executable to limit each bidder up to a maximum number of bids per auction (see at least paragraph [0024]).

17. Claim 5 rejected under 35 U.S.C. 103(a) as being unpatentable over Admon in view of Mendiola and further in view of Herzog et al., US 20040059663 (herein after Herzog).

18. As per **claim 5**:

Admon teaches receiving contact information from bidders to clarify information, but does not disclose an auction system as claimed in claim 1, wherein the bid acceptance message notifies the bidder that either their bid is the current lowest unique bid, their bid is not unique (see at least claim 5) or their bid is unique, but is not currently the lowest unique bid (for the purposes of examination, this claim is interpreted in the alternative).

Art Unit: 3695

19. However Herzog discloses an auction system as claimed in claim 1, wherein the bid acceptance message notifies the bidder that either their bid is the current lowest unique bid, their bid is not unique (see at least claim 5) or their bid is unique, but is not currently the lowest unique bid (for the purposes of examination, this claim is interpreted in the alternative).

20. It would have been obvious to one of ordinary skill in the art to include in the practice of clarifying information to bidder of Admon, the practice of sending notifications as taught by Herzog, because this would allow non-winning bidders to be informed, and one of ordinary skill in the art would have recognized that the results of the combination were predictable.

21. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings Admon, Mendiola and Herzog to obtain the invention as specified in claim 5.

22. As per **claim 6:**

Mendiola discloses an auction system as claimed in claim 1 wherein instructions are further executable to:

 sending a notification message to a bidder when the status of the bidder's bid changes (see at least paragraph [0181]).

23. As per **claim 7 :**

 Admon teaches receiving contact information from bidders to clarify information,

Art Unit: 3695

however Admon does not disclose an auction system as claimed in claim 6, wherein the status of the bidder's bid changes to not currently being a unique bid and the notification message notifies the bidder that their bid is no longer unique and the price of the bidder's bid

24. However Mendiola discloses sending a notification message when the status of the bidder's bid changes and the bidder is alerted of the change (see at least paragraph [0181]) Mendiola also discloses sending the price information with this message.

25. Further Herzog discloses notifying a bidder that their offer was not unique (see at least claim 6).

26. It would have been obvious to one of ordinary skill in the art to substitute the current highest bid, with bidder's price in a unique price auction because this would have provided the bidder with a guide to making a decision about their next bid, just as the current highest bid does from the Mendiola reference.

27. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings Admon, Herzog and Mendiola to obtain the invention as specified in claims 7.

28. As per **claim 8:**

Admon teaches receiving contact information from bidders to clarify information, however Admon does not disclose an auction system as claimed in claim 6, wherein the status of the bidder's bid changes to not currently being a lowest unique bid and the

Art Unit: 3695

notification message notifies the bidder that their bid is no longer the lowest unique but is currently unique.

29. However Mendiola discloses sending a notification message when the status of the bidder's bid changes and the bidder is alerted of the change (see at least paragraph [0181]) Mendiola also discloses sending the price information with this message.

30. Further Herzog discloses notifying a bidder that their offer was not unique (see at least claim 6).

31. It would have been obvious to one of ordinary skill in the art to alert the user of their bidding status because this would have provided the bidder with a guide to making a decision about their next bid, just as the current highest bid does from the Mendiola reference.

32. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings Admon, Herzog and Mendiola to obtain the invention as specified in claims 8.

33. As per **claim 9**:

Mendiola discloses an auction system as claimed in claim 1, wherein the received bidder messages are passed at least partially over the internet before processing the bid or the bid acceptance messages are passed at least partially over the internet before being sent by SMS (see at least paragraphs [0178]-[0182]).

Art Unit: 3695

34. As per **claim 10**:

Mendiola teaches the method as claimed in claim 1, wherein the communication with the bidders is handled by software in real time (see at least paragraphs [0015] and [0148]).

35. As per **claim 29**:

36. Admon discloses the auctioning system as claimed in claim 1, wherein the instructions are further executable to: determine that the auction of the lot has ended (see paragraphs [0025] and [0026]);

37. Admon does not particularly disclose instructions to send a notification message to the bidder whose bid is the lowest unique bid that the bidder has placed a winning bid.

38. However Admon does teach contacting the winning bidder (see paragraph [0022]).

39. It would have been obvious to one of ordinary skill in the art to automate the practice of notifying the winning bidder of Admon because the claimed invention is merely the automation of a well known manual process, and one of ordinary skill in the art would have recognized that the results of such automation were predictable.

40. Claims 12-13, 15-16, 18-26 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Admon in view of Mendiola and further in view of M2 Presswire "Link77: Link77 introduces reverse charge SMS billing service for ringtones and logos."

Art Unit: 3695

(Hereinafter Link77) published December 18, 2001.

As per **claim 26**:

Admon discloses an auctioning system for facilitating bidder participation in an auction for the purchase of a lot, comprising:

at least a first data processing device and a memory in communication with the data processing device, the memory storing instructions executable by the processor (see paragraphs [0021] and [0026] to:

receive a plurality of bid data item over a computer network to which the computer system is connected, each bid data item being derived from a bid message sent by a bidder (see at least paragraph [0032]);

determine whether the bid data item comprises an acceptable bid (reads on requiring bids to have include a participation fee);

determine whether each bid data item is the current lowest unique bid for an auction (see paragraph [0027]);

and send the acceptance message, and billing the bidder (see paragraph [0022]), wherein at least one acceptable bid is not a winning bid.

41. Admon does not, however Mendiola does disclose:

if it is determined that the bid data item is the current lowest unique bid, then to generate a bid acceptance message indicating that the bid is the current lowest unique bid, and if it is determined that the bid data item is not the current lowest unique bid,

Art Unit: 3695

then to generate a bid acceptance message indicating that the bid is not the current lowest unique bid (see at least paragraph [0188]);

determine a destination telecommunications device phone number for the acceptance message (see at least paragraph [0188]);

and send the acceptance message at least partially over the computer network, for transmission to the bidder at the destination telecommunications device by a reverse billed SMS message (see paragraphs [0178]-[0182]).

42. Admon and Mendiola do not disclose a reverse billed SMS message.

43. However Link77 discloses reverse billing a user for a service (see at least Link77 abstract)

44. Therefore it would have been obvious to It would have been obvious to one of ordinary skill in the art to include in the method of interacting with bidders using SMS of Mendiola, the methods of billing bidders and selecting a winner as disclosed by Herzog and the method of reverse billing using SMS as taught by Link77 because this would have added a convenient method of billing and paid for the convenience of SMS messages. Further, the claimed invention is merely a combination of old elements, and in the combination, each element merely would have performed the same function as it did separately, and one of ordinary skill in the art would have recognized that the results of the combination were predictable.

45. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings of Admon, Mendiola and Link77 to obtain the invention as

Art Unit: 3695

specified in claim 26.

46. As per **claim 12**:

Mendiola discloses an auction system as claimed in claim 26 wherein the instructions are further executable to:

receive an auction identifier data item ("UIN") with one of the bid data items, the auction identifier data item being derived from the same bid message sent by a bidder as the bid data item;

and use the auction identifier data item to determine an auction corresponding to the auction identifier data item (see at least paragraph [0185]-[0187]).

47. As per **claim 13**:

Admon discloses an auction system as claimed in claim 26 and further comprising:

validate one of the bid data items to determine whether a corresponding bid is an acceptable bid for the auction (see at least paragraph [0022]).

48. As per **claim 15**:

Admon does not disclose an auction system of claim 26, wherein the instructions are further executable to:

check whether one of the bid data item is in the correct bid units;

and if not, then convert the one of the bid data item into the correct bid units.

Art Unit: 3695

49. However Official Notice is taken that it was well known in the art at the time of the invention to convert currencies when receiving a bid. For example when receiving a bid in an international auction, it was well known to convert the currencies to a base currency (such as dollars), using a going exchange rate, in order to compare the bids for determining a winner.

50. It would have been obvious to one of ordinary skill in the art to include in the system for auctioning of Admon, the well known system for converting currencies of bids because this would have allowed for international auctions .Further because the claimed invention is merely a combination of old elements, and in the combination, each element merely would have performed the same function as is did separately, and one of ordinary skill in the art would have recognized that the results of the combination were predictable.

51. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings of Mendiola, Admon and Link77 for at least the reasons disclosed in claim 26, and the well known system for converting currencies to obtain the invention as specified in claim 15.

52. As per **claim 16:**

Admon does not disclose an auction system of claim 26 wherein the instructions are further executable to generate a unique identifier for each bid data item received.

53. However Official Notice is taken that generating a unique ID (such as a highly precise timestamp) for each received bid is old and well known in the art at the time of

Art Unit: 3695

the invention. For example, many electronic auctions will timestamp each incoming bid to determine the winning bid in case of a tie, or for auditing purposes on stock exchanges.

54. It would have been obvious to one of ordinary skill in the art to include in the system for receiving bids of Mendiola, Admon and Link77 (see rejection of claim 26 above), the well known system for generating a unique ID for each incoming bid because this would have allowed for proper auditing of the auction service. Further, because the claimed invention is merely a combination of old elements, and in the combination, each element merely would have performed the same function as is did separately, and one of ordinary skill in the art would have recognized that the results of the combination were predictable.

55. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings of Mendiola, Herzog and Link77 for at least the reasons disclosed in claim 26, and the well known system for generating a unique ID for each incoming bid to obtain the invention as specified in claim 16.

56. As per **claim 18**:

Admon discloses an auctioning system of claim 26, wherein instruction executable to determine whether one of the bid data item is the current lowest unique bid for the auction comprises instructions executable to:

carry out a look up of a database of stored bid data items for the auction (see paragraphs [0023] and [0027]);

Art Unit: 3695

determine whether the number of stored bids at a bid data item value is 1;

if the number of stored bids at the bid data item value is 1 then carry out a look up of the database of stored bid data items for the auction to determine the current lowest unique bid value;

and determine whether the bid data item value is less than the current lowest unique bid value (see at least paragraph [0027]).

57. Admon does not disclose wherein the number of stored bids at a bid data item value is zero.

58. It would have been obvious to It would have been an obvious and simple substitution to one of ordinary skill in the art to substitute zeros for 1's in the system for Auctioning of Admon, and one of ordinary skill in the art would have recognized that the results of the substitution were predictable.

59. As per **claim 19**:

Mendiola discloses an auction system as claimed in claim 26, further comprising instructions executable to marshal the bid acceptance message, which comprise instructions executable to:

select a message template for the acceptance message (see at least paragraph [0188]);

look up stored variable data items (user's phone number);

and populate the message template with the variable data items (see at least

Art Unit: 3695

paragraph [0188]).

60. As per **claim 20**:

Mendiola discloses an auctioning system as claimed in claim 26, wherein instructions executable to send the acceptance message includes instructions executable to load a message object with message data (the message) and bidder data (bidder's phone number) (see at least paragraph [0188]).

61. As per **claim 21**:

Mendiola discloses an auction system of claim 20, wherein sending the acceptance message further includes placing the message object in a message queue table (see at least paragraph [0188] where the message queue table is silently disclosed. As the messages are taught to be sent, it must be that the messages are sent through the "store and forward" network of the SMSC, see also paragraph [0016]).

62. As per **claim 22**:

Mendiola discloses an auction system of claim 21, wherein sending the acceptance message further includes:

polling the message queue table to identify new messages;

passing new messages to an aggregator service for transmission as an SMS message to the bidder (see at least paragraph [0188] where the message queue table is silently disclosed. As the messages are taught to be sent (transmission), it must be

Art Unit: 3695

that the messages are sent through the “store and forward” (store new messages and forward them on) network (aggregator) of the SMSC, see also paragraph [0016]).

63. As per **claim 23 and 24:**

Mendiola does not disclose an auction system of claim 22, wherein the instructions are further executable to receive a receipt ID from the aggregator for the message passed to the aggregator and store the receipt ID when received and determine whether the receipt ID has been received and update a status associated with the sent message.

64. However Official Notice is taken that it was well known in the art to receive a delivery confirmation (sometimes known as a delivery report) (a receipt ID) from an SMS server (aggregator) and store the ID when received and updating the delivered status associated with the sent message. For example, when an SMS is delivered, a mobile service provider may receive a delivery confirmation (receipt ID) from the mobile phone for the SMS message. For billing and auditing purposes this information is stored by the mobile phone service provider, because the fees associated with the SMS message are only charged if the message is delivered. Further the service provider continues to attempt to deliver the SMS message until the SMS message has been delivered and the delivery confirmation has been received (updating a status) or until the provider determines the message is undeliverable.

65. It would have been obvious to one of ordinary skill in the art to include in the system for accepting bids for a live auction using SMS phone number of Mendiola,

Art Unit: 3695

Herzog and Link77 (see rejection of claim 26 above), the well known system for receiving, storing and determining using delivery confirmations because the claimed invention is merely a combination of *old and well known* elements, and in the combination, each element merely would have performed the same function as is did separately, and one of ordinary skill in the art would have recognized that the results of the combination were predictable.

66. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings of Mendiola, Herzog and Link77 to obtain the invention as specified in claim 23 and 24.

67. As per **claim 25**:

68. Admon in view of Mendiola renders obvious the auctioning system as claimed in claim 24, wherein the instructions are further executable to:

69. Identify a group of lowest unique bids (see Admon paragraph [0027]); and

70. determining the lowest of the group of lowest unique bids for which the bid acceptance message has been received (see Admon paragraph [0027]).

71. As per **claim 30 (New)**:

72. Admon discloses the auctioning system as claimed in claim 26, wherein the instructions are further executable to: determine that the auction of the lot has ended (see paragraphs [0025] and [0026]);

Art Unit: 3695

73. Admon does not particularly disclose instructions to send a notification message to the bidder whose bid is the lowest unique bid that the bidder has placed a winning bid.

74. However Admon does teach contacting the winning bidder (see paragraph [0022]).

75. It would have been obvious to one of ordinary skill in the art to automate the practice of notifying the winning bidder of Admon because the claimed invention is merely the automation of a well known manual process, and one of ordinary skill in the art would have recognized that the results of such automation were predictable.

76. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Admon in view of Mendiola further in view of Link77 as applied to claim 26 above, and further in view of Abeshouse et al., EP 1220126 A2 (hereinafter Abeshouse), published March 7, 2002.

77. As per **claim 14**:

Admon does not but Mendiola discloses an auctioning system as claimed in claim 26 wherein the instructions are further executable to:

poll a message store to identify new messages (see at least paragraph [0185]-[0188]);

78. use a mobile phone telephone number data item to determine whether one of the bids is associated with an auction and if it is then loading message data into a message

Art Unit: 3695

object (the response to the user) (see at least paragraph [0186]-[0188] wherein it is shown the mobile phone telephone number data item is used by the SMSC server to receive the SMS message, then using the UIN from the recipient the message is associated with the auction); and pass the message object to an auction application (see at least paragraph [0188] wherein the message object is passed to the auction application's SMS sending system).

79. Admon, Mendiola and Link77 do not disclose if the bid is not associated with a live (live is silently disclosed since Mendiola discloses an auction duration (see at least paragraph [0165])) session for the auction, then using an auction identifier data item to determine whether the one of the bids is for an auction and if it is then loading message data into a message object.

80. Abeshouse discloses wherein a bids is not associated with a live session for the auction, then using an auction identifier data item to determine whether the bid is for an auction and if it is then loading message data into a message object (see at least claim 9, paragraphs [0013]-[0020] wherein it is disclosed if a bid is received after the close of an auction, the system checks to see if the bid is for an auction which has closed accepting the bid (loading message data into a message object)).

81. It would have been obvious to one of ordinary skill in the art to include in the system for accepting bids for a live auction using SMS phone number of Admon in view of Mendiola and Link77 (see rejection of claim 26 above), the system for accepting bids as taught by Abeshouse because this would have allowed for determining whether a submitted bid should be accepted when it is sent from a participant processor prior to

Art Unit: 3695

closing time as perceived at the participant processor, but after the auction processor perceived closing time (see at least paragraph [0019]). Further because the claimed invention is merely a combination of old elements, and in the combination, each element merely would have performed the same function as is did separately, and one of ordinary skill in the art would have recognized that the results of the combination were predictable.

82. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings of Mendiola, Herzog and Link77 for at least the reasons disclosed in claim 26, and to further include the teachings of Abeshouse to obtain the invention as specified in claim 14.

83. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Admin in view of Mendiola and further in view of Link77 as applied to claim 13 above, and further in view of Hong Kong's Tender, published June 2000.

84. As per **claim 17**:

Admon does not however Mendiola discloses an auctioning system of claim 13, wherein instructions executable to validate the one of the bid data item include at least one of the following:

instructions executable to determine whether an auction is active (see at least paragraph [0165]);

and instructions executable to determining whether the one of the bid data item falls within a range of acceptable bid values (see at least paragraph [0171]).

Art Unit: 3695

85. Mendiola and Admon do not disclose instructions executable to determine whether a bid corresponding to the one of the bid data items exceeds a maximum number of bids for the bidder (see at least paragraph [0037] wherein a maximum number of bids);

86. Hong Kong Tender discloses determining whether the bid exceeds a maximum number of bids for the bidder (see at least page 2 “participation rules”);

87. It would have been obvious to one of ordinary skill in the art to include in the system for receiving bids of Admon in view of Mendiola and Link77 (see rejection of claim 26 above), the system for determining whether the bid exceeds a maximum number of bids for the bidder as taught by Hong Kong’s Tender because the claimed invention is merely a combination of old elements, and in the combination, each element merely would have performed the same function as is did separately, and one of ordinary skill in the art would have recognized that the results of the combination were predictable.

88. Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings of Admon, Mendiola and Link77 for at least the reasons disclosed in claim 26, and Hong Kong’s Tender to obtain the invention as specified in claim 17

Response to Arguments

Applicant’s arguments, see pages 9-15, filed 13 January 2010, with respect to the rejection(s) of claim(s) 1-10, 12-26 and 29-30 under 35 U.S.C. §103(a) and claim 25

Art Unit: 3695

under 35 U.S.C. §112 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of newly found prior art reference.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to RYAN D. DONLON whose telephone number is (571)270-3602. The examiner can normally be reached on Monday through Friday 7:30am to 5:00pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Kyle can be reached on (571) 272-6746. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
